Professional Summary

Senior Full Stack Laravel Developer and Team Lead with 4+ years of experience building scalable web applications with Laravel, PHP, MySQL, React, and Next.js. Specialized in RESTful APIs and ERP systems, improving application performance by up to 40% through query optimization, Redis caching, and indexing. Experienced with Docker, AWS, and CI/CD pipelines. Currently leading a development team at Cord Digital, managing code reviews, task planning, and on-time delivery across multiple client projects.

Professional Experience

Team Lead – Senior Full Stack Developer
Cord Digital
October 2025 – Present | Giza, Egypt

- Reviewed 500+ code commits monthly and coordinated team task assignments, reducing critical production bugs by 30% and maintaining 99.9% uptime.
- Built and deployed RESTful APIs integrating three external services, improving data retrieval speed by 20% for end users.
- Designed ERP modules for sales, inventory, and reporting, reducing manual data entry by 35% per month.
- Optimized inventory queries, cutting average load time from 4.5s to 2.7s (40% faster) and improving finance reporting accuracy.
- Implemented strategic indexing and query tuning across core modules, improving system scalability as data volumes grew.

Full Stack Laravel Developer
SEO Wolves (Part-time)
July 2026 – Present | Giza, Egypt

- Rebuilt frontend and backend features for 10 client projects, increasing user engagement and satisfaction by 25%.
- Improved website loading speed by 30% across client sites.
- Developed RESTful APIs and integrated third-party services, improving data tracking and analytics for 10 client projects.
- Developed mobile-first web applications with a consistent cross-platform experience, increasing user interaction by 22%.

Senior Full Stack Laravel Developer
The Mok Company (Part-time)
January 2024 – June 2026 | Giza, Egypt

- Refactored the API layer and SQL queries and added Redis caching for high-frequency calls, reducing endpoint latency by 50%.
- Designed database structures for critical financial data, increasing query speed by 75%.
- Implemented role-based access control for 12,000+ user accounts across five permission tiers, with zero unauthorized access incidents in the first quarter after launch.
- Owned the full development lifecycle from concept to deployment, delivering secure, scalable applications with 99.9% uptime.

Full Stack Developer
Kemeder / Kemework
June 2022 – October 2025 | Cairo, Egypt

- Built core marketplace features in Laravel, supporting scalable user interactions and transactions.
- Improved API performance by 40% using caching and query optimization.
- Integrated payment gateways and real-time notifications, improving transaction reliability and user engagement.

Full Stack Developer
Inom Tecks (Part-time)
November 2022 – May 2023 | Alexandria, Egypt

- Developed CRM features with PHP and Laravel, reducing manual task processing by 40% and improving client workflow efficiency.
- Improved system stability by adding tests and fixing recurring bugs.

Full Stack Developer
Invasso (Freelance)
October 2024 – Present | Parsippany, NJ, USA (Remote)
- Developing full stack web solutions for US-based software house Invasso on a per-project freelance basis, covering software development and digitization projects.
- Building backend systems and RESTful APIs with Laravel and PHP, integrated with modern frontends and mobile applications.
- Collaborating remotely with the US team on requirements, delivery, and deployment of client projects.

Education

Bachelor's Degree in Computers and Information
Faculty of Computers and Information
2024 | Damanhour University, Egypt
Department of Information Systems - Credit Hours System

Projects

Cordiana ERP System
All-in-One Enterprise Business Management Platform
- Built a scalable enterprise-grade management system.
- Designed and structured modular components for sales, HR, and reporting workflows.
- Integrated RESTful APIs and enforced role-based access control (RBAC).

Taggz App
AI-Powered Event Photo Matching Platform
- Developed high-performance backend APIs for an event-driven platform
- Designed media processing pipelines and role-based access workflows for user management.
- Implemented secure authentication and scalable API infrastructure.

One Step Industrial
B2B E-Commerce & Equipment Supply Platform
- Delivered a robust B2B e-commerce platform with scalable product and order management workflows.
- Optimized database performance, achieving a 35% increase in speed and reduced response latency.
- Designed a custom analytics-driven admin dashboard, improving inventory accuracy and reducing stock discrepancies by 40%.

Tour Egypt Club
Travel & Tourism Booking Engine
- Developed advanced filtering and reservation logic to streamline booking operations.
- Enhanced system performance by 30%, reducing load times and improving overall user experience.

DocHome
Real-Time Medical Home Care Platform
- Developed a real-time home care platform using Laravel 10 and RESTful APIs, serving patients and medical staff.
- Integrated live chat and notifications via broadcasting/events, improving communication speed by 50%.
- Enhanced patient response with live alerts, improving service quality and satisfaction.

Al-Nasser Group Portal
Enterprise Retail Operations & Delivery Dashboard
- Led the development of a large-scale enterprise portal, optimizing logistics and multi-branch workflows and increasing operational efficiency by 25%.
- Implemented RBAC, multi-tenant architecture, and optimized reporting systems for operational teams.

Al Manarat Al Munira
Heavy Equipment & Crane Fleet Management Platform
- Built an enterprise web platform for industrial equipment hire, service management, and engineering project tracking.
- Implemented secure backend workflows for service requests, automated client notifications, and quote handling.

Mountain Lakes Bagels
Online Food Ordering Platform (Web & Mobile Apps) - Invasso
- Built a full online ordering platform for a New Jersey bagel shop & deli, with web ordering and companion iOS/Android apps.
- Developed a dynamic menu with categories, featured and most-popular items, cart, customer accounts, and offers.
- Implemented delivery & takeaway ordering with business-hours and delivery-cutoff rules, plus catering orders, backed by RESTful APIs shared across web and mobile.
